

# Kalido® Dynamic Information Warehouse™

The Kalido® Dynamic Information Warehouse™ product consists of a set of components that are deployed in a 3 tier configuration. Each component has specific software and hardware requirements. The layers (and components) are as follows:

## Client (rich)

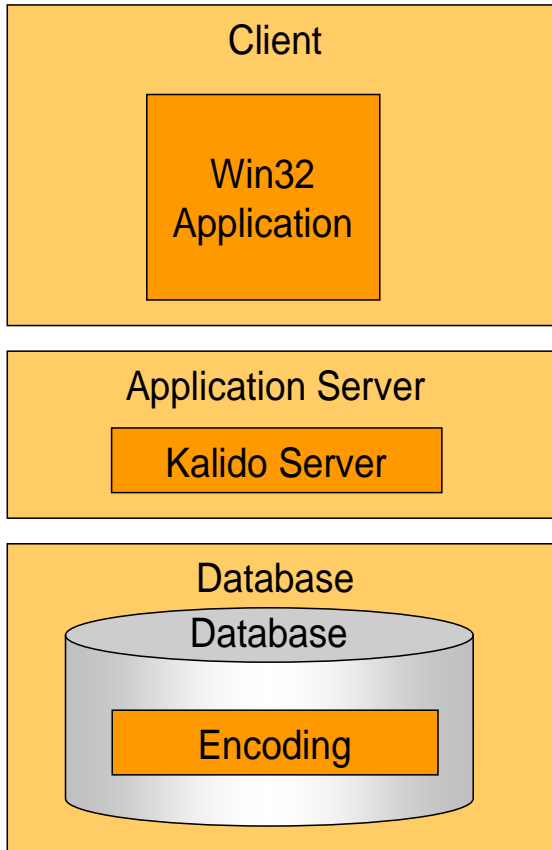

For Kalido Dynamic Information Warehouse, the client has a set of Windows C++ applications that provide the user interface to Kalido Dynamic Information Warehouse. The installation routines also run in a rich client application.

## Application Server

This is a set of C++ applications and services. This layer hosts the business logic for the application.

## Database Server

This consists of a relational database installed on an operating system.
