

Kalido[®] Master Data Management[™]

Kalido delivers the only business-centric master data management solution that supports data governance across the enterprise. With Kalido MDM, business users and decision makers can begin to trust their data and finally unlock the real value of the “true intelligence” within their systems.

MDM and Data Governance

Data governance is the process of managing the policies, rules and systems that govern how data is maintained and used throughout an organization. Because master data drives operational and analytical business processes, invalid master data can have a negative impact on business. With MDM as a key component of a data governance program, organizations can improve business decision making through better data consistency and data quality while reducing risk and cost.

Kalido MDM offers the core capabilities to model, manage and govern master data, leading to better data that feeds business processes to lead to better business outcomes.

Model it

Handles every domain

Many multi-domain MDM products support product data and customer data, but may be limited in other domains. Kalido MDM can handle every master data domain in a single technology.

Complex data relationships

Kalido MDM is model-driven and easily models the many complex data relationships between entities across every master data domain.

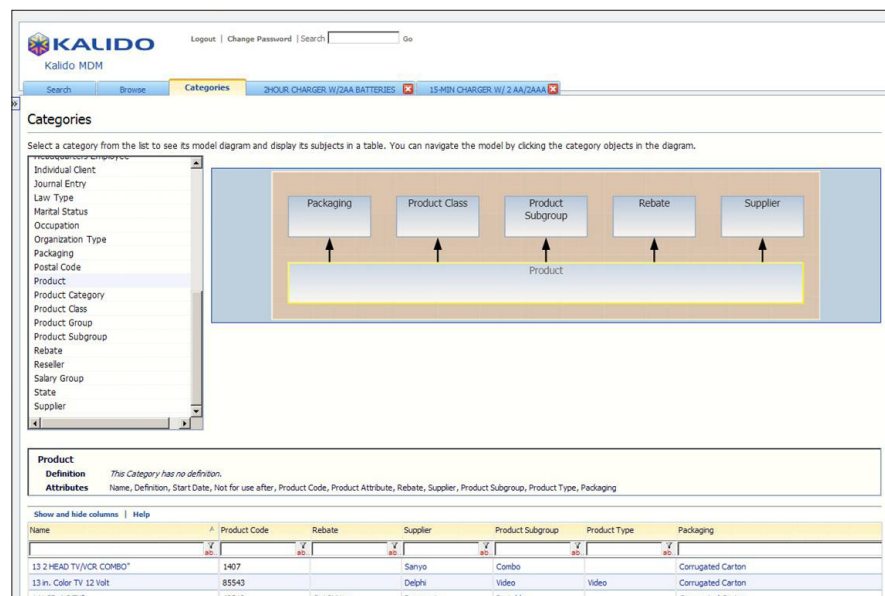

Broad MDM use case support

Kalido MDM can be used in both analytical and operational MDM use cases, such as harmonizing data for analytic and for operations, hierarchy management for BI, operational data governance and system migrations and consolidations.

Master it

Agility and flexibility

Kalido MDM is built on an agile and flexible model-driven foundation that allows your MDM implementation to keep pace with changing business requirements.

Business users can leverage the power and simplicity of the business model to easily navigate master data by category.

Auto-generated interfaces

Kalido MDM eliminates customized interface development costs by automatically generating the appropriate user interface for administrators, stewards and consumers.

Data validation

Powerful data matching and embedded workflow delivers valid data, keeping work-in-progress and published data separate, for more efficient business processes.

Govern it

Consumer interface

Business users can quickly and easily search, browse and help maintain clean master data through an intuitive consumer interface.

Master data lifecycle management

Kalido MDM supports the business process of managing master and reference data through its lifecycle.

Accountability & Stewardship

By facilitating business involvement in the process with data stewards and IT, Kalido MDM enables collaboration that improves accountability and stewardship.

About Kalido

Kalido is the leading provider of business-driven data governance software. Kalido enables companies to manage data as a shared enterprise asset by supporting the business process of data management. Kalido software has been deployed at more than 300 locations in over 100 countries, including 20 percent of the world's most profitable companies as determined by Fortune Magazine.
